

A revolutionary product that keeps
watering your plants and vegetables
so you don't have to.

Introducing **WaterStor™**, a thin sheet that,
when planted beneath the soil of your veg-
etation, creates a water-storing barrier that
gradually releases moisture into the soil
reducing both water usage and frequency.

Other WaterStor™ Products

WaterStor™ Sod Sheets

Sod will only need 1/2 the water

WaterStor™ Tree Strips

Trees use 1/2 the water

WaterStor™ Garden Strips

Vegetables thrive with WaterStor™

WaterStor™ Landscaping Mats

Outdoor Landscaping uses 1/2
the water even over sand!

Water Insurance for
Your Plants and Vegetables.

A Gradual Release of Water

WaterStor™ is a mixture of EVA powder and sodium polyacrylate powder that when combined in correct proportions makes a thin membrane that absorbs up to 400 times its weight in water. It releases the water very slowly over a period of 12 to 21 days, depending on the amount of sodium acrylate used in the mixture and the amount of water mixed with the matrix. This combination, after being hydrated with water, creates a very “controlled” release of the water into the soil. WaterStor is also compatible with all soil types and is “plant friendly”. When applied correctly, **WaterStor™** will last between 5 and 7 years. This data comes directly from the BASF Corporation which has conducted extensive research utilizing their products in the agricultural field.

The Benefits of WaterStor™

Whether used in commercial nurseries, agricultural applications, or in your own home gardens, potted plants and landscaping, WaterStor™ has many benefits:

- Longer bloom lifespan
- Increased drought resistance
- Reduced water usage
- Facilitated transfer of nutrients in substrate
- Quicker germination
- Shorter growth cycles
- Increased crop yield
- Aids in soil aeration
- Improved root growth

*Insure lawns, potted plants, landscaping, vegetables and more with **WaterStor™** and watch the benefits grow!*

Get to the Root of the Problem

WaterStor™ provides just the right amount of water to the root system in a very controlled application. The illustration below shows where WaterStor is positioned and integrated directly into the root base of the plant.

Insure Your Fruits & Vegetables

Great for fruits & veggies!

WaterStor™ provides growers of vegetables and fruits with the ability to substantially improve their yields of high value crops such as tomatoes, lettuce, and strawberries. These vegetables require lots of water and WaterStor provides them with a well-regulated supply.

Insure Your Landscaping

Start your lawn out the right way with **WaterStor™ Sod Sheets™** under your sod and spend less time and money watering. Also an excellent solution for keeping your trees and shrubery well-hydrated.
